RE: Compliance Evaluation Inspection
B&B Concrete Products, Inc.
NPDES Permit No. TNG110241
Maury County

Dear Mr. Burden:

On September 9, 2009 I conducted a Compliance Evaluation Inspection (CEI) of the B&B Concrete Products, Inc. wastewater treatment system located in Columbia, TN. A CEI is conducted to determine compliance with the requirements of the General NPDES Permit for Discharges of Storm Water Runoff and Process Wastewater Associated with Ready Mix Concrete Facilities. The following comments are for your consideration:

1. The facility has an on site concrete batching plant for the production of concrete septic tanks and other concrete products. The concrete is poured into a steel metal form to mold each septic tank and lid. This process takes place under a large metal canopy. After curing the tanks are removed and stored on site. There is minimal waste associated with the process. Any waste concrete from the process is placed on site.
2. A small retention basin is located down gradient of the facility where storm water from the concrete batching plant and the truck washout collect. Solids are removed from this basin and allowed to dry before being hauled away with any waste concrete. There has been no discharge associated with the facility.

I would like to thank you for your time and cooperation during the inspection. If you have any questions you may reach me at gary.horne@tn.gov or at 1-931-840-4166.

Sincerely,

Gary Horne
Division of Water Pollution Control
